Data Warehousing / Data Mining
(R&G, ch 25 and 26)
C. Faloutsos and A. Pavlo

CMU SCS

Data mining - detailed outline

- Problem
- Getting the data: Data Warehouses, DataCubes, OLAP
- Supervised learning: decision trees
- Unsupervised learning
 - association rules

Faloutsos/Pavlo CMU-SCS 2

CMU SCS

Problem

Given: multiple data sources
Find: patterns (classifiers, rules, clusters, outliers...)

NY
sales(p-id, c-id, date, \$price)

SF
customers(c-id, age, income, ...)

PGH

Faloutsos/Pavlo CMU-SCS 3

CMU SCS

Data Ware-housing

First step: collect the data, in a single place (= Data Warehouse)

How?
How often?
How about discrepancies / non-homegeneities?

Faloutsos/Pavlo CMU-SCS 4

CMU SCS

Data Ware-housing

First step: collect the data, in a single place (= Data Warehouse)

How? A: Triggers/Materialized views

How often? A: [Art!]

How about discrepancies / non-homogeneities? A: Wrappers/Mediators

Faloutsos/Pavlo CMU-SCS 5

CMU SCS

Data Ware-housing

Step 2: collect counts. (DataCubes/OLAP)

Eg.:

Faloutsos/Pavlo CMU-SCS 6

CMU SCS

OLAP

Problem: “is it true that shirts in large sizes sell better in dark colors?”

sales					C / S	S	M	L	TOT
ci-d	p-id	Size	Color	\$	Red	20	3	5	28
C10	Shirt	L	Blue	30	Blue	3	3	8	14
C10	Pants	XL	Red	50	Gray	0	0	5	5
C20	Shirt	XL	White	20	TOT	23	6	18	47
...									

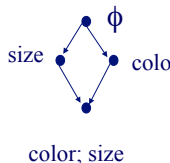

Faloutsos/Pavlo CMU-SCS 7

CMU SCS

DataCube

Faloutsos/Pavlo CMU-SCS 13

CMU SCS

DataCubes

SQL query to generate DataCube:

- Naively (and painfully:):

```
select size, color, count(*)
from sales where p-id = 'shirt'
group by size, color
```

```
select size, count(*)
from sales where p-id = 'shirt'
group by size
```

...

Faloutsos/Pavlo CMU-SCS 14

CMU SCS

DataCubes

SQL query to generate DataCube:

- with ‘cube by’ keyword:

```
select size, color, count(*)
from sales
where p-id = 'shirt'
cube by size, color
```

Faloutsos/Pavlo CMU-SCS 15

CMU SCS

DataCubes

DataCube issues:

Q1: How to store them (and/or materialize portions on demand)

Q2: Which operations to allow

Faloutsos/Pavlo CMU-SCS 16

CMU SCS

DataCubes

DataCube issues:

Q1: How to store them (and/or materialize portions on demand) A: ROLAP/MOLAP

Q2: Which operations to allow A: roll-up, drill down, slice, dice

[More details: book by Han+Kamber]

Faloutsos/Pavlo CMU-SCS 17

CMU SCS

DataCubes

Q1: How to store a dataCube?

C / S	S	M	L	TOT
Red	20	3	5	28
Blue	3	3	8	14
Gray	0	0	5	5
TOT	23	6	18	47

Faloutsos/Pavlo CMU-SCS 18

CMU SCS

DataCubes

Q1: How to store a dataCube?

A1: Relational (R-OLAP)

Color	Size	count	C / S	S	M	L	TOT
Red				20	3	5	28
'all'	'all'	47	Blue	3	3	8	14
Blue	'all'	14	Gray	0	0	5	5
Blue	M	3	TOT	23	6	18	47
...							

Faloutsos/Pavlo CMU-SCS 19

CMU SCS

DataCubes

Q1: How to store a dataCube?

A2: Multi-dimensional (M-OLAP)

A3: Hybrid (H-OLAP)

C / S	S	M	L	TOT
Red	20	3	5	28
Blue	3	3	8	14
Gray	0	0	5	5
TOT	23	6	18	47

Faloutsos/Pavlo CMU-SCS 20

CMU SCS

DataCubes

Pros/Cons:
ROLAP strong points: (DSS, Metacube)

Faloutsos/Pavlo CMU-SCS 21

CMU SCS

DataCubes

Pros/Cons:
ROLAP strong points: (DSS, Metacube)

- use existing RDBMS technology
- scale up better with dimensionality

Faloutsos/Pavlo CMU-SCS 22

CMU SCS

DataCubes

Pros/Cons:
MOLAP strong points: (EssBase/hyperion.com)

- faster indexing
(careful with: high-dimensionality; sparseness)

HOLAP: (MS SQL server OLAP services)

- detail data in ROLAP; summaries in MOLAP

Faloutsos/Pavlo CMU-SCS 23

CMU SCS

DataCubes

Q1: How to store a dataCube

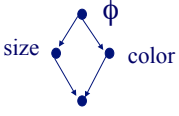

➡ Q2: What operations should we support?

Faloutsos/Pavlo CMU-SCS 24

CMU SCS

Faloutsos/Pavlo CMU-SCS 29

CMU SCS

DataCubes

Q2: What operations should we support?

- Roll-up
- Drill-down
- Slice
- Dice
- (Pivot/rotate; drill-across; drill-through
- top N
- moving averages, etc)

Faloutsos/Pavlo CMU-SCS 30

CMU SCS

D/W - OLAP - Conclusions

- D/W: copy (summarized) data + analyze
- OLAP - concepts:
 - DataCube
 - R/M/H-OLAP servers
 - ‘dimensions’; ‘measures’

Faloutsos/Pavlo CMU-SCS 31

CMU SCS

Outline

- Problem
- Getting the data: Data Warehouses, DataCubes, OLAP
- ➔ • Supervised learning: decision trees
- Unsupervised learning
 - association rules
 - (clustering)

Faloutsos/Pavlo CMU-SCS 32

CMU SCS

Decision trees - Problem

Age	Chol-level	Gender	...	CLASS-ID
30	150	M		+
				...
				-
				??

Faloutsos/Pavlo CMU-SCS 33

CMU SCS

Decision trees

- Pictorially, we have

Faloutsos/Pavlo CMU-SCS 34

CMU SCS

Decision trees

- and we want to label '?'

Faloutsos/Pavlo CMU-SCS 35

CMU SCS

Decision trees

- so we build a decision tree:

Faloutsos/Pavlo CMU-SCS 36

Decision trees

- so we build a decision tree:

Faloutsos/Pavlo CMU-SCS 37

Outline

- Problem
- Getting the data: Data Warehouses, DataCubes, OLAP
- Supervised learning: decision trees
 - problem
 - approach
 - scalability enhancements
- Unsupervised learning
 - association rules
 - (clustering)

Faloutsos/Pavlo CMU-SCS 38

Decision trees

- Typically, two steps:
 - tree building
 - tree pruning (for over-training/over-fitting)

Faloutsos/Pavlo CMU-SCS 39

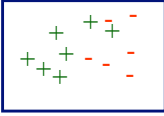

Tree building

- How?

Faloutsos/Pavlo CMU-SCS 40

CMU SCS

Tree building

- How?
- A: Partition, recursively - pseudocode:
 Partition (Dataset S)
 if all points in S have same label
 then return
 evaluate splits along each attribute A
 pick best split, to divide S into S1 and S2
 Partition(S1); Partition(S2)

Faloutsos/Pavlo CMU-SCS 41

CMU SCS

Tree building

- Q1: how to introduce splits along attribute A_i
- Q2: how to evaluate a split?

Faloutsos/Pavlo CMU-SCS 42

CMU SCS

Tree building

- Q1: how to introduce splits along attribute A_i
- A1:
 - for num. attributes:
 - binary split, or
 - multiple split
 - for categorical attributes:
 - compute all subsets (expensive!), or
 - use a greedy algo

Faloutsos/Pavlo CMU-SCS 43

CMU SCS

Tree building

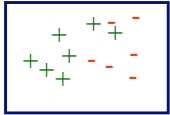

- Q1: how to introduce splits along attribute A_i
- ➔ • Q2: how to evaluate a split?

Faloutsos/Pavlo CMU-SCS 44

CMU SCS

Tree building

- Q1: how to introduce splits along attribute A_i
- ➔ • Q2: how to evaluate a split?
- A: by how close to uniform each subset is - ie., we need a measure of uniformity:

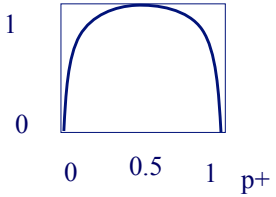

Faloutsos/Pavlo CMU-SCS 45

CMU SCS

Tree building

Details

entropy: $H(p_+, p_-)$ Any other measure?

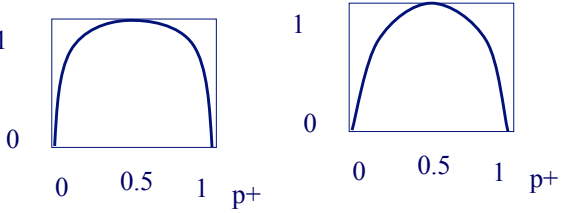

Faloutsos/Pavlo CMU-SCS 46

CMU SCS

Tree building

Details

entropy: $H(p_+, p_-)$ 'gini' index: $1 - p_+^2 - p_-^2$

Faloutsos/Pavlo CMU-SCS 47

CMU SCS

Tree building

Details

entropy: $H(p_+, p_-)$ 'gini' index: $1 - p_+^2 - p_-^2$

(How about multiple labels?)

Faloutsos/Pavlo CMU-SCS 48

CMU SCS Details

Tree building

Intuition:

- entropy: #bits to encode the class label
- gini: classification error, if we randomly guess '+' with prob. p_+

Faloutsos/Pavlo CMU-SCS 49

CMU SCS

Tree building

Thus, we choose the split that reduces entropy/classification-error the most. Eg.:

Faloutsos/Pavlo CMU-SCS 50

CMU SCS Details

Tree building

- Before split: we need $(n_+ + n_-) * H(p_+, p_-) = (7+6) * H(7/13, 6/13)$ bits total, to encode all the class labels
- After the split we need:
 - 0 bits for the first half and
 - $(2+6) * H(2/8, 6/8)$ bits for the second half

Faloutsos/Pavlo CMU-SCS 51

CMU SCS

Tree pruning

- What for?

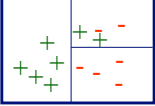

Faloutsos/Pavlo CMU-SCS 52

CMU SCS
Details

Tree pruning

Shortcut for scalability: DYNAMIC pruning:

- stop expanding the tree, if a node is ‘reasonably’ homogeneous
 - ad hoc threshold [Agrawal+, vldb92]
 - (Minimum Description Language (MDL) criterion (SLIQ) [Mehta+, edbt96])

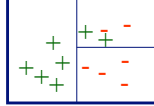

Faloutsos/Pavlo
CMU-SCS
53

CMU SCS
Details

Tree pruning

- Q: How to do it?
- A1: use a ‘training’ and a ‘testing’ set - prune nodes that improve classification in the ‘testing’ set. (Drawbacks?)
- (A2: or, rely on MDL (= Minimum Description Language))

Faloutsos/Pavlo
CMU-SCS
54

CMU SCS
Details

Outline

- Problem
- Getting the data: Data Warehouses, DataCubes, OLAP

 - problem
 - approach
 - scalability enhancements
- Unsupervised learning
 - association rules
 - (clustering)

Faloutsos/Pavlo
CMU-SCS
55

CMU SCS
Details

Scalability enhancements

- Interval Classifier [Agrawal+, vldb92]: dynamic pruning
- SLIQ: dynamic pruning with MDL; vertical partitioning of the file (but label column has to fit in core)
- SPRINT: even more clever partitioning

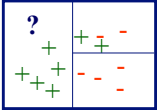

Age	Chol-level	Gender	...	CLASS-ID
30	150	M		-

				-

Faloutsos/Pavlo
CMU-SCS
56

CMU SCS

Conclusions for classifiers

- Classification through trees
- Building phase - splitting policies
- Pruning phase (to avoid over-fitting)
- For scalability:
 - dynamic pruning
 - clever data partitioning

Faloutsos/Pavlo CMU-SCS 57

CMU SCS

Outline

- Problem
- Getting the data: Data Warehouses, DataCubes, OLAP
- Supervised learning: decision trees
 - problem
 - approach
 - scalability enhancements
- Unsupervised learning
 - association rules
 - (clustering)

Faloutsos/Pavlo CMU-SCS 58

CMU SCS

Association rules - idea

[Agrawal+SIGMOD93]

- Consider 'market basket' case:
 - (milk, bread)
 - (milk)
 - (milk, chocolate)
 - (milk, bread)
- Find 'interesting things', eg., rules of the form:
 - milk, bread -> chocolate | 90%

Faloutsos/Pavlo CMU-SCS 59

CMU SCS

Association rules - idea

In general, for a given rule

$$I_j, I_k, \dots, I_m \rightarrow I_x \mid c$$

'c' = 'confidence' (how often people buy I_x , given that they have bought I_j, \dots, I_m)

's' = support: how often people buy I_j, \dots, I_m, I_x

Faloutsos/Pavlo CMU-SCS 60

Association rules - idea

Problem definition:

- given
 - a set of ‘market baskets’ (=binary matrix, of N rows/ baskets and M columns/products)
 - min-support ‘s’ and
 - min-confidence ‘c’
- find
 - all the rules with higher support and confidence

Faloutsos/Pavlo
CMU-SCS
61

Association rules - idea

Closely related concept: “large itemset”

$I_j, I_k, \dots, I_m, I_x$

is a ‘large itemset’, if it appears more than ‘min-support’ times

Observation: once we have a ‘large itemset’, we can find out the qualifying rules easily (how?)

Thus, let’s focus on how to find ‘large itemsets’

Faloutsos/Pavlo
CMU-SCS
62

Association rules - idea

Naive solution: scan database once; keep $2^{**}|I|$ counters

Drawback?

Improvement?

Faloutsos/Pavlo
CMU-SCS
63

Association rules - idea

Naive solution: scan database once; keep $2^{**}|I|$ counters

Drawback? $2^{**}1000$ is prohibitive...

Improvement? scan the db $|I|$ times, looking for 1-, 2-, etc itemsets

Eg., for $|I|=3$ items only (A, B, C), we have

Faloutsos/Pavlo
CMU-SCS
64

CMU SCS

Association rules - idea

\textcircled{A} \textcircled{B} \textcircled{C} first pass
 100 200 2
 min-sup:10

Faloutsos/Pavlo CMU-SCS 65

CMU SCS

Association rules - idea

$\textcircled{A,B}$ ~~$\textcircled{A,C}$~~ ~~$\textcircled{B,C}$~~
 \textcircled{A} \textcircled{B} ~~\textcircled{C}~~ first pass
 100 200 2
 min-sup:10

Faloutsos/Pavlo CMU-SCS 66

CMU SCS

Association rules - idea

Anti-monotonicity property:
 if an itemset fails to be 'large', so will every superset of it (hence all supersets can be pruned)

Sketch of the (famous!) 'a-priori' algorithm
 Let $L(i-1)$ be the set of large itemsets with $i-1$ elements
 Let $C(i)$ be the set of candidate itemsets (of size i)

Faloutsos/Pavlo CMU-SCS 67

CMU SCS

Association rules - idea

Compute $L(1)$, by scanning the database.
 repeat, for $i=2,3,\dots$,
 'join' $L(i-1)$ with itself, to generate $C(i)$
 two itemset can be joined, if they agree on their first $i-2$ elements
 prune the itemsets of $C(i)$ (how?)
 scan the db, finding the counts of the $C(i)$ itemsets - set this to be $L(i)$
 unless $L(i)$ is empty, repeat the loop

Faloutsos/Pavlo CMU-SCS 68

CMU SCS

Association rules - Conclusions

Association rules: a great tool to find patterns

- easy to understand its output
- fine-tuned algorithms exist

Faloutsos/Pavlo CMU-SCS 69

CMU SCS

Outline

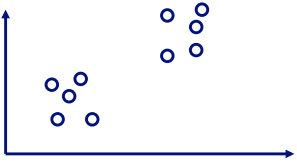

- Problem
- Getting the data: Data Warehouses, DataCubes, OLAP
- Supervised learning: decision trees
 - problem
 - approach
 - scalability enhancements
- Unsupervised learning
 - association rules
 - clustering

Faloutsos/Pavlo CMU-SCS 70

CMU SCS

Clustering

- Problem:
 - given N points in V dimensions,
 - group them

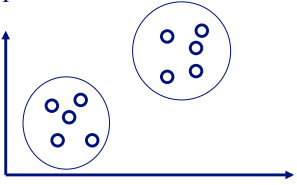

Faloutsos/Pavlo CMU-SCS 71

CMU SCS

Clustering

- Problem:
 - given N points in V dimensions,
 - group them

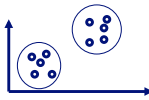

Faloutsos/Pavlo CMU-SCS 72

CMU SCS

Clustering

- Problem:
 - given N points in V dimensions,
 - group them
- MANY algorithms:
 - K-means, X-means, BIRCH, OPTICS

Faloutsos/Pavlo CMU-SCS 73

CMU SCS

Clustering

Easiest to describe: k-means

- User gives # clusters 'k'
- Start with 'k' random seeds
- Assign each point to its nearest seed
- Move seed towards center, and repeat

Faloutsos/Pavlo CMU-SCS 74

CMU SCS

Overall Conclusions

- Data Mining = ``Big Data`` Analytics = Business Intelligence:
 - of **high** commercial, government and research interest
- DM = DB+ ML+ Stat+Sys
- Data warehousing / OLAP: to get the data
- Tree classifiers (SLIQ, SPRINT)
- Association Rules - 'a-priori' algorithm
- clustering: k-means (& BIRCH, CURE, OPTICS)

Faloutsos/Pavlo CMU-SCS 75
