Lecture#6: *Rel. model - SQL part I*
(R&G, chapter 5)

General Overview - rel. model

- Formal query languages
 - rel algebra and calculi
- Commercial query languages
 - ➔ – SQL
 - QBE, (QUEL)

Faloutsos, Pavlo CMU SCS 15-415/615 2

Overview - detailed - SQL

- DML
 - select, from, where, renaming
 - set operations
 - ordering
 - aggregate functions
 - nested subqueries
- other parts: DDL, embedded SQL, auth etc

Faloutsos, Pavlo CMU SCS 15-415/615 3

Relational Query Languages

- A major strength of the relational model:
supports simple, powerful *querying* of data.
- Two sublanguages:
 - DDL – Data Definition Language
 - define and modify schema (at all 3 levels)
 - DML – Data Manipulation Language
 - Queries can be written intuitively.

Faloutsos, Pavlo CMU SCS 15-415/615 4

CMU SCS

Relational languages

- The DBMS is responsible for efficient evaluation.
 - Query optimizer: re-orders operations and generates query plan

Faloutsos, Pavlo CMU SCS 15-415/615 5

CMU SCS

The SQL Query Language

- **The most widely used relational query language.**
 - Major standard is SQL-1999 (=SQL3)
 - Introduced “Object-Relational” concepts
 - SQL 2003, SQL 2008 have small extensions
 - SQL92 is a basic subset

Faloutsos, Pavlo CMU SCS 15-415/615 6

CMU SCS

SQL (cont'd)

- PostgreSQL has some “unique” aspects (as do most systems).

Faloutsos, Pavlo CMU SCS 15-415/615 7

CMU SCS

DML

General form

```

select a1, a2, ... an

HelpfulTable	
Ssn	Gpa
123	3.5
678	3.3
